

Coverage sensitivity of denominator-aligned recurrence tests

Solid lines show recurrent loss (primary endpoint); dashed lines show negative median (supplementary endpoint). The dotted line marks FDR = 0.05.

Status strip for all 25 gene-coverage cells. E = evaluable; NE = not evaluable. Vertical position in this strip does not represent FDR.

MAOB	E	E	E	E	NE 6 profiles
CYP3A4	E	E	E	E	NE 3 profiles
CYP3A5	E	E	NE 12 profiles	NE 5 profiles	NE 1 profiles
CYP3A7	E	E	E	E	NE 15 profiles
